

Assignment 1 (due date September 29, 2026)

1. Write a program that compares three integer numbers then specifies and prints the **greatest** and **smallest** one (do not use built-in function such as **min** or **max**).
2. Write a program that prints whether the number is divisible by 3, 5, both, or none of them.
3. Write a program that prints odd numbers from 2 to 20, another prints even numbers from 35 to 7.
4. Write a program that prints numbers divisible by 2 and 5 at the same time from 50 to 2.
5. Write a program to find the reverse of a given number (for example, the reverse of 12345 = 54321, do not use any built-in function such as the `strrev` function).
6. Write a program that calculates lowest common multiplier (LCM) of two positive integer numbers (for example, LCM of 8 and 12 = 24).
7. Write a program that calculates highest common factor (HCF) of two integer numbers (if any) (for example, HCF of 18 and 24 = 6).
8. Write a program that produces multiplication table (up to 12*12) using nested loops. Format the output in in table as shown in the following figure.

The screenshot shows a web browser window with a single tab titled 'Multipli x'. The address bar displays 'localhost/mtable.' with a star icon for bookmarks. The main content area is titled 'Multiplication Table' and contains a 12x12 grid of numbers. The grid represents the multiplication of integers from 1 to 12, with each row and column starting from 1 and ending at 12. The numbers are formatted with a light blue background and a thin black border.

1	2	3	4	5	6	7	8	9	10	11	12
2	4	6	8	10	12	14	16	18	20	22	24
3	6	9	12	15	18	21	24	27	30	33	36
4	8	12	16	20	24	28	32	36	40	44	48
5	10	15	20	25	30	35	40	45	50	55	60
6	12	18	24	30	36	42	48	54	60	66	72
7	14	21	28	35	42	49	56	63	70	77	84
8	16	24	32	40	48	56	64	72	80	88	96
9	18	27	36	45	54	63	72	81	90	99	108
10	20	30	40	50	60	70	80	90	100	110	120
11	22	33	44	55	66	77	88	99	110	121	132
12	24	36	48	60	72	84	96	108	120	132	144

9. Write a program that prints whether the number is a prime or non-prime.
10. Write a program that prints prime numbers from 10 to 50.
